Competitors pay $200 or 10 percent of their cash plus 10 percent of the listed purchase price of their unmortgaged streets, transportation companies or utilities and 10 percent of the original cost of their houses and hotels.

38. PROPERTY TAX
Everybody pays $75 to the Treasurer.

39. TRANSPORTATION COMPANIES
Transportation companies owned by competitors earn the usual 10 percent return no matter how many are owned. This is because they are subject to utility regulations.

The fares of transportation companies owned by monopolists double with each additional company acquired by a monopolist. (Caution: A monopolist who owns all four transport companies will be hard to beat in this game. In the real world, can you imagine what would happen if a monopolist controlled all transport - without utility regulation?)

40. UTILITIES
When a player lands on a utility owned by someone else, he/she throws the dice and pays as follows:

- Monopolists collect 4X the amount of the dice throw if one utility is owned; 10X if both are owned.
- * Monopolists collect 4X the amount of the dice throw if one utility is owned; 10X if both are owned.

41. ANTI-MONOPOLY FOUNDATION
Competitors roll one die. If 1, collect $25; if 2, collect $50. Otherwise, no grant, no collection.

Monopolists pay $160 into the Foundation. Payment is made to the Treasurer.

42. INSUFFICIENT HOUSES
If the Treasurer runs out of houses or hotels, players must make up extra ones out of cardboard or paper as needed.

43. TRADING
Trading between players is allowed except for houses and hotels. These must be returned to the Treasurer (Rule 13) before properties are traded.

44. BANKRUPTCY
Bankrupted players must first recall their houses and hotels back to the Treasurer at half price. Then, the bankrupt players' remaining money and property (with mortgages still in effect) are turned over to the other players who caused the bankruptcy, and the bankrupt player leaves the game.

45. WHO IS THE RICHEST PLAYER

The richest player and winner of Game 8 (see Rule 1) is determined by adding up the players' cash plus income that can be earned on unmortgaged properties when one player lands on them. For income on utilities, each utility owner throws the dice as under Rule 20.

46. BORROWING FROM OTHER PLAYERS
Players may not borrow from other players.

TWO HOUR GAME (This game is also recommended for tournaments)

The winner and richest player is chosen by the following procedure:

A. Players can adjust their holdings as they think best by buying or selling houses or mortgaging or paying off mortgages on their holdings. The player may only deal with the Treasurer and they may not trade or sell property or pay money amongst themselves.

B. Competitors are allowed to keep 10% of their remaining cash while monopolists are allowed to keep 30% of their remaining cash. The remainder is turned over to the Treasurer.

C. The Treasurer travels around the board once, stopping on each piece of owned property once. He or she then pays from the bank to the owner of each property the rent or payment due according to the usual rules.

D. The winner is the player with the most cash. (Explanation: These rules take account of the fact that a winning competitor or monopolist in a two-hour game must be both in cash and investments or assets.)

INSTRUCTIONS FOR COMPETITORS

2. Go to U.S. Air Line.
3. Pay bank $75.
4. Collect $25 from each monopolist.
5. Go to U.S. Electric Company.
7. Go to Beacon St. in Boston.
8. Collect $75 from bank.
9. Go to start.
11. Collect $50 from bank.
12. Go to price war.
INSTRUCTIONS:
The instructions which are unique to Anti-Monopoly® have been printed in bold type.

Ready to play? Remember, all elements in this game have been mathematically constructed to make a fair game between competitors and monopolists. If either competitors or monopolists have the best of it in the first few games you play, it's because luck is on their side—or because they are playing better.

1. OBJECT OF GAME
   Players have a choice of two ways of playing and winning the game:
   Game A. To win by bankrupting all other players.
   Game B. To be the richest competitor after all monopolists have been bankrupted or to be the richest monopolist after all competitors have been eliminated (see Rule 25 for determining who is richest).

2. TREASURER
   Select one player as Treasurer to manage and distribute the money, title cards, house, hotel, and mortgage notes. The Treasurer must keep his/her own money strictly separate from the Treasury money.

3. COMPETITOR / MONOPOLIST CARD
   The card listing instructions to be followed by monopolists and competitors is placed beside the board.

4. ROLE DIVISION
   • The players are divided evenly to be either competitors or monopolists.
   • Even division means that there are the same number of competitors and monopolists or, if there is an uneven number of players, the difference between competitors and monopolists cannot be more than one. (For example, a division of 3 competitors and 3 monopolists is legitimate but a division of 3 competitors and 4 monopolists is against the rules.)
   • Role division is done by rolling the dice and letting the player with the highest dice score choose between being either a monopolist or competitor and then letting the others make their choices by clockwise rotation. Players may trade off roles before the start of the game if they wish.
   • The initial role assignment cannot be changed during the game.

5. STARTING BUDGET
   The Treasurer gives each player $1,500; two $500, three $100, two $50, seven $10, five $5 and five $1. (Caution: The money is just right to keep the game balanced. It is less than you may remember from other games—so watch your money!)

6. ORDER OF PLAY AND CHOICE OF PLAYING TOKEN
   The same dice outcome used from Role Division is also used to determine the order of play and to choose the color of playing tokens. Competitors must choose a blue pawn; monopolists must choose a green pawn.

7. DOUBLES GIVE ONE EXTRA TURN
   Players throwing doubles move their turn as usual—but must then take one extra turn. On this extra turn, doubles are treated as an ordinary throw and do not bring about yet another turn.

8. MOVEMENT OF PLAYERS AROUND THE BOARD
   All players place their tokens on Start. Players then move their tokens around the board by rolling the dice and moving them clockwise around the board according to the number of spaces indicated by the dice outcome. Players also move their tokens according to other directions in the game.

9. PROPERTY PURCHASES AND PAYMENTS
   Players who land on a street, transportation company or utility not owned by anyone may buy this property at the price marked on the board or title card. Upon purchase, the Treasurer gives the purchaser the appropriate title card. If a player declines to buy the property, it stays in the Treasury as unowned property.

10. MONOPOLIZING A CITY
    When monopolists own any two streets in a city, they have monopolized the city. Then they can charge double rent on the streets owned. When the city has three streets, monopolists can charge double on that third street also when it is acquired. Monopolists may build only in cities they have monopolized.

11. BUILDING HOUSE AND HOTELS
    • Competitors can build up to four houses on each street they own. Instead of building a fifth house, competitors return the four houses to the Treasury and purchase a hotel. Prices for the four houses and the hotel are set by the Treasurer. Monopolists place their houses on the space on which the city name is printed.
    • Monopolists can build up to three houses on each city street they have monopolized. Instead of the fourth house, monopolists return the three houses to the Treasury and purchase a hotel. Prices for the four houses and the hotel are set by the Treasurer. Monopolists place their houses on the space marked with an "M".
    • Houses and hotels may be purchased only on the player's turn.
    • There are no restrictions on how players may distribute their houses on the properties on which they may build. For example, they may put one house on one property in a city and a hotel on another property in the same city. However, once built, houses may not be shifted around on properties.

12. MORTGAGES
    • Mortgage values are one-half of the purchase price listed on each title card. Players cannot collect rent on any mortgaged property and they cannot have houses on mortgaged property. Monopolists cannot have houses in a city if any one of the two properties needed for monopolization of a city are mortgaged. Monopolists can collect rent on any unmortgaged property in such a city but not double rent.
    • When players mortgage a property, they turn over to the Treasurer the appropriate title deed in exchange for the appropriate lot or mortgage note. The Treasurer keeps the mortgaged properties apart from unowned property title cards.
    • Houses must be returned to the Treasurer for the usual return price (see Rule 3) before the property on which they are located can be mortgaged.
    • Mortgaged streets, transportation companies and utilities may be sold to other players as mortgaged properties at any agreed price.
    • If the players want to get their mortgaged property back into play, they may pay the Treasurer the amount listed on the mortgage note. The Treasurer then returns the appropriate title card to the player in exchange for the mortgage note.

13. RETURNING HOUSES TO THE TREASURER
    The compensation is one-half of the purchase price. Houses may be sold only to the Treasurer.

14. START SPACE
    Players collect $100 when landing on or passing Start.

15. PRISON, PRICE WAR OR JUST VISITING SPACE
    Improvements are listed on the title cards. Players can end up here in two different ways:
    A. They land there during a regular move. Then they are just visiting. They move on when their next turn comes and they pay no penalties to leave.
    B. They are sent there by landing on the Go To Prison or Go To Price War space or by following the improvements on the Competition/Monopolist card. In this case, they have to move their token to either the PRISON or PRICE WAR triangle without collecting anything from the Start space. They may have to pay a penalty to move on:
       • Competitors are sent to PRISON. While on PRISON, competitors can collect rent or other charges due them.
       • Monopolists are sent to PRISON. While in PRISON, monopolists do not collect rents or other charges normally due them.
    C. Players may leave PRISON or PRICE WAR in one of two ways:
       1. They throw doubles on any one of their first two regular turns after landing there. If no doubles are thrown on these turns, they must pay $50 before their third turn. On their third turn, they move forward as usual.
       2. They pay $50 before the first or second turn and then move forward as usual.
    D. Doubles thrown while on the PRISON or PRICE WAR space are treated exactly like any other doubles (see Rule 7).

16. COMPETITOR OR MONOPOLIST SPACE
    Any player landing on this space throws the two dice and then follows the corresponding instructions on the Competitor/Monopolist card. For example, a competitor throwing an 8 follows instruction 8 on the competitor side of the card.

17. INCOME TAX SPACE
    Pay $200 or a percentage of your assets (assets are money, houses and hotels, and unmortgaged properties). Monopolists pay $200 or 20 percent of their cash plus 10 percent of the listed purchase price of their unmortgaged streets, transportation companies or utilities and 10 percent of the original cost of their houses and hotels.

INSTRUCTIONS FOR MONOPOLISTS

2. Go to start.
3. Collect $75 from the bank.
4. Go to Beacon St. in Boston.
5. Pay bank $75.
7. Collect $50 from bank.
10. Collect $25 from each competitor.
11. Go straight to prison.
